

From 27–28 January, the 2nd transnational management meeting of project #Solar4Future+ (Solar Energy for Future Generations: Be bright, turn to solar power) took place in Cuevas del Campo, Spain

The project consortium was warmly welcomed by the host school, **CEIP San Isidro Labrador**, which prepared a rich and engaging programme. Highlights included a cultural event and presentations of **real-life modules** that use solar and other sustainable energy sources. These modules were developed by students of **CEIP San Isidro Labrador** within the chapter “*Renewable Energy and Sustainability in Technologies and Society*” of the **Solar Energy Curriculum**, created as part of the project.

During the management meeting, partners discussed the successful completion of the Solar Energy Curriculum testing, reviewed ongoing activities, and planned the remaining tasks to be completed before the end of the project. These include:

- Implementing the **Solar Energy Challenge**
- Testing the **Community Science Project (CSP) Toolkit**
- Adjusting all of the materials
- Translating the CSP toolkit and Solar Energy Curriculum into the national languages of the project's consortium.

The **final project meeting** will take place in **Türkiye from 18 to 19 May**.
